# Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUBCELLULAR LOCATION: Outer membrane (By similarity).

SUBCELLULAR LOCATION: Outer membrane (By similarity).

DOMAIN: CONTAINS 153 IMPERFECT REPEATS OF THE CONSENSUS

OCTAPEPTIDE A.G.Y.G.S.T.L.T; FURTHER ON A 16-RESIDUE AND A

REGIONAL 48-RESIDUE PERIODICITY IS SUPERIMPOSED.

MISCELLANGUS: A STRUCTURAL MODEL IS SUGGESTED IN WHICH THE ICE

NUCLEATION PROTEIN DISPLAYS A SYMMETRY RELATED TO THAT OF ICE.

SIMILARITY: Belongs to the bacterial ice nucleation protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         FUNCTION: Ice nucleation proteins enable

Outer membrane protein B precursor (168 kDa surface-layer protein)

(Surface protein antigen) (Cell surface antigen 5) (Sca5) (rompB)

(romp B) [Contains: 120 kDa surface-exposed protein (Surface protein antigen) (120 kDa outer membrane protein ompB); 32 kDa beta peptide].
